

MIMARIO · PRODUCT & TECHNICAL ARCHITECTURE BRIEF

THE AUTONOMOUS REVENUE & ENGINEERING OPERATING SYSTEM

Version: 1.0-RC1 · Architecture: Local-First, Zero-Cloud, Cryptographic · Status: 100% Operational

1. PRODUCT VISION & ECONOMIC MECHANISM

MIMARIO addresses the most fundamental challenge facing independent software engineers and technical agencies: **the disconnect between the ability to write code and the ability to discover, qualify, contract, and safely settle paid engineering tasks without risk.**

Unlike traditional coding assistants that wait passively for human prompting, MIMARIO operates as a proactive autonomous system bridging commercial opportunity discovery and verified technical execution.

2. ZERO CLOUD INFRASTRUCTURE COST

Most contemporary autonomous agents rely on expensive remote cloud VMs, incurring steep compute bills and network latency. MIMARIO operates on a fundamentally different local-first paradigm:

- **100% Local-First:** Core qualification, parsing, file quarantine, and delivery generation run entirely on the host machine's processor.
- **Zero Mandatory Cloud Invoices:** No managed AWS/GCP databases, paid proxy servers, or mandatory external API subscriptions required for core runtime.
- **Total Privacy:** Proprietary client code and contractual data never leave the operator's computer.

3. 5-TIER STANDARDIZED SERVICE CATALOG

MIMARIO maps technical requirements into 5 standardized commercial deliverables with precise scope boundaries:

Service Tier	Target Price	Technical Scope Description	Est. Turnaround
Quick Triage	\$29 — \$39	Defect verification, environment reproduction, fix check	1-2 hours
Repo Diagnostic	\$59 — \$89	Vulnerability audit, dependency scan, health report	2-4 hours
Code Rescue	\$149 — \$249	Build error resolution, compatibility patch, unit tests	4-8 hours
Integration Sprint	\$299 — \$499	New API connection, backend module, docs, schema	1-2 days
Advanced Sprint	\$750+	Subsystem refactor, critical performance, architecture	2-4 days

4. CONTROL ROOM LUXURY OPERATOR EXPERIENCE

The Control Room UI provides an intuitive, high-resolution management interface built in React 19 and strict TypeScript:

- **'WHAT TO DO NOW?' Hub:** Distills market noise into a maximum of 3 prioritized actions in real-time.

- **Apple HIG-Inspired Chromatic Design:** Amber for required human actions; Blue for active work; Green for verified packages; Muted Gray for idle wait states.
- **Executive-Grade Proposals:** Automatically generated commercial documents ready for client presentation.

5. ACQUISITION READINESS

MIMARIO represents a complete, turn-key software asset with zero technical debt, ready for rapid integration into an existing developer tooling or talent marketplace platform.
